---

Here are the select dioxin/furan congener results (Elizabeth and I confirmed 5) from Sample Location W024. I put a pivot table together so you could check back to the Sample IDs/Dates if curious.

LWG did not add the column and filter results together for this station as they did for others, so I did. The v.wxad column in the data table is sum of column (v.c) and filter (v.f).

All units in parts per quadrillion=picograms/liter.

Let me know if you need anything else or if any errors.

Thanks,

TK
